

Web based service for **part tracking, turbine maintenance history, usage based budget projection and maintenance planning.**

Directly in your browser

TMMonitor is easily accessible and operable by multiple users on any platform.

Centralized Data Storage

All the information of your **parts, budget** and **maintenance history** in one secure place.

Cost Savings

Minimize capital and repair costs by better parts rotation.

Main features

- Full maintenance history
- Parts tracking with remaining lifetime
- Simulator based future planning
- Graphical representation of maintenance timeline
- Cost and value reports + budget planning
- Easy data entry by the Client

"Finally we have full and complete picture of the maintenance"

"With TMMonitor we know exactly the condition of the turbines and remaining lifetime of parts. I, as a manager, also need to see into the future. The simulator makes it possible to reserve parts and plan forthcoming inspections. The software paid itself back in a year."
